

INNOVAC[®] CCPP

Inactivated CCPP Vaccine

Reg. No. CTD 3372 (Kenya PPCB)

INNOVAC[®] CCPP

INNOVAC[®] CCPP is an inactivated vaccine for immunization of goats against Contagious Caprine Pleuropneumonia (CCPP) disease.

COMPOSITION

INNOVAC[®] CCPP contains inactivated *Mycoplasma capricolum* subspecies *capripneumoniae*, (formerly referred to as the F38 biotype) antigen at a concentration 0.15mg per 1 ml dose. It is prepared from *Mycoplasma capricolum* subspecies *capripneumoniae* and inactivated using saponin.

INDICATIONS

For active immunization of goats against contagious caprine capripneumoniae (CCPP) disease.

STORAGE

- Store between +2°C and +8°C (Refrigerator).
- Do not freeze.
- Protect from heat and direct sunlight.

ADMINISTRATION AND DOSAGE

- Administer 1ml vaccine per animal by subcutaneous injection.
- Shake well before use.
- Vaccinate only healthy animals.
- Use sterile needles and syringe and apply aseptic procedures.
- Once the vaccine bottle has been broached, it must be used immediately and any remaining quantity discarded.

VACCINATION SCHEDULE

- Primary vaccination to animals of over 3 months of age.
- Secondary booster vaccination should be carried out every 6 months.

CONTRA-INDICATIONS AND WARNINGS

- For Veterinary use only.
- Do not use in sick or unhealthy animals.
- Do not use after the expiry date printed on the label.
- Do not use if vaccine package or seal is broken or damaged.
- As may occur with all vaccines, rare and occasional anaphylactic reactions may occur in some vaccinated animals. If this occurs, adrenaline should be administered.

WITHDRAWAL PERIODS

- Zero days.

PRESENTATION

- Bottles contain 50 doses and 100 doses of vaccine.
